Responsibilities

- **Research and Application:** Conduct thorough research on the latest AI technologies and trends. Investigate new ways to apply AI in various smaller aspects of our employees' work, enhancing productivity and efficiency.
- **AI Model Training and Implementation:** Use our company's data to effectively train AI models. This involves understanding the datasets, preparing them for training, and utilizing AI tools to create models that can add value to our business processes.
- **Collaboration and Reporting:** Work closely with different departments to understand their needs and how AI can be integrated into their daily operations. Prepare reports and presentations to demonstrate the findings and progress of AI applications within the company.
- **Learning and Development:** Stay updated with the latest advancements in AI and machine learning. Participate in relevant workshops, webinars, and training sessions to enhance your skills and knowledge.

Requirements

- Currently pursuing a degree in Computer Science, Computer or Electrical Engineering, Artificial Intelligence, or a related field.
- Strong analytical and problem-solving skills.
- Basic understanding of AI and machine learning concepts.
- Familiarity with AI tools provided by leading AI technology providers.
- Excellent communication and collaboration skills.
- Ability to work independently and in a team environment.
- Eagerness to learn and apply new AI technologies in real-world scenarios.
